

ASTAR RIGGING CONSTRUCTIONS

CAPABILITY STATEMENT

Delivering
industry-leading
**electrical
transmission
line** upgrades
and installations
across Australia

About **Astar Rigging Constructions**

Based in Yatala, QLD and operating Australia wide, Astar Rigging Constructions delivers fully-qualified electrical transmission upgrade and installation work across power networks.

Using the latest machinery and tools, we can successfully complete the most challenging projects on high-voltage networks, including tower assembly, stringing activities, helicopter works and specialised rigging.

Since 2017, our contract partners have included major network asset owners and leading operators in the transmission industry.

With a growing team of highly-experienced and dedicated **managers**, supervisors and linemen, we are excited to help deliver the future of power in Australia with major system upgrades and the commissioning of new assets.

Specialised **Electrical Transmission Services**

Latest Equipment & Tools

To successfully deliver the requirements of our contract partners, we have invested heavily in leading-edge equipment and machinery. This gives our crew confidence to operate safely and effectively in the most challenging environments.

- ✓ Gondola Platforms
- ✓ Erecting Winches
- ✓ Gin Pole
- ✓ Conductor Stringing & Rigging Equipment
- ✓ Tooling & Climbing Equipment

Rigorous OH&S Standards

Astar's OH&S is of critical importance in the planning, organisation and undertaking of our operations and it underpins the safety and wellbeing of all our staff and contract partners.

With a fully-licensed team of electrical transmission line experts, we strongly believe that there is no task that is so important or urgent that it exposes our managers, employees or contractors to unnecessary risk or danger.

We also constantly look for ways to improve our OH&S while ensuring our team receives regular training and education.

“

Despite a challenging client and some tough site constraints, **Astar employees delivered their works ahead of programme** and with utmost professionalism and highest regard for safety. Not only was this recognised by Downer, but also by our client BHP. I highly recommend this very motivated team.

”

**DARREN PEGRAM,
DOWNER CONSTRUCTION MANAGER**

RECENT PROJECTS

1

BHP's High Voltage Transmission Grid

This large-scale project by BHP required a broad range of technical expertise from our crew. Working with the principal contractor, we were engaged to assemble and erect transmission towers along the Newman to Yandi power line.

2

Transgrid Transmission Line 39

Working closely with Transgrid on high voltage electricity lines in Sydney's west, this project involved the careful positioning of 2 new delta towers and cut-in work to Transgrid's first ever 330kV transition stations. Our team was responsible for the removal of 8 spans of conductors and a number of lattice towers.

3

Transgrid Transmission Line 94X

On T/L 94X and T/L 948 working with the principle contractor we were involved in the replacement of old wooden poles with new concrete poles and the transfer of conductors to the new structures.

WHY CHOOSE ASTAR RIGGING CONSTRUCTIONS

With a fully-licensed and highly-trained team of electrical transmission line experts, we can complete major maintenance and installation works across all of Australia's power networks. We have built a strong reputation with our contract partners for delivering projects on time, on budget and to a high standard.

- ★ Quality Assurance
- ⚙️ Experienced Team
- 👥 Positive workplace culture
- 🏆 High standard workmanship
- 🔧 Problem solvers
